

HIGH CARBON STEEL BLADES

Versatile blades offer high value in a variety of wood cutting applications.

Available in both flex back and hard back construction to accommodate applications where blade fatigue is a factor as well as those where precision and cut straightness are most important. Some flex back specifications are available with a bright finish. Blades are manufactured from a single piece of high carbon steel with individually hardened tooth tips. They can be resharpened for even greater value.

Applications:

- Portable and stationary wood mills
- Single head and multi-head resaw systems
- Scragg mills

Features:

- Flex back blades are fatigue resistant
- Hard back blades offer straighter cuts
- Individually hardened tooth tips
- Can be resharpened

Benefits:

- Low cost-per-blade/low cost-per-cut
- Resharpenable blades extend blade life

QUIK SILVER® BLADES

Ideal for wood cutting applications where blade fatigue is an increased concern.

A special alloy steel gives these blades enhanced fatigue resistance. They are manufactured from a single piece of Quik Silver alloy steel with individually hardened tooth tips. We make them available in both hard back and flex back specifications for use in applications requiring both extreme fatigue-resistance and straight cuts. They can be resharpened for even greater value.
